

SolutionsOS Workshop

Amy Horton & Christine Danzi

Agenda

- Solutions OS Overview
- Repo Walkthrough
- Kiro AI Tooling
- Contributing to Repo
- Next Steps and Q&A

1

Overview

Why?

The Problem

- Product context is fragmented
- Similar decisions without a shared resource
- AI tools have no structured context to work from

Solution

- Single repo as the knowledge base for all solutions
- Shared standards and domain context
- Enable human collaboration and AI-assisted development

Expectation

- This is the main source of truth for feature work
- Every team contributes to and maintains their product folders

Why Separate from ProductOS?

Avoid context bloat

Can reference ProductOS selectively
for certain features

Focus on our ADLC

Repo is specific to Solutions
development lifecycle

More Reliable Output

Loading irrelevant context can make
AI responses less precise

Repo Structure

[View README](#)

products/

└─ gam-solutions/	Suite: shared GAM context + child solutions
└─ domain/	Personas, acquisition lifecycle, branding
└─ steering/	Directives inherited by all solutions
└─ solutions/	Contract Writing, PSE, etc.
└─ case-management-studio/	Standalone product
└─ procuresight/	Standalone product

@DOCS/ Shared standards & schemas

ai-framework/ AI configs for Product & Engineering

.kiro/ / .gemini/ AI tool orchestration

2

Walkthrough

Demo

- Repo
 - Review: products, domain and feature folders
 - Understand: Steering file usage and context flow
- Kiro Chat Tips

3

Kiro Tooling

Steering Files

Always-on context & instructions

Tells Kiro who you are, what your product does, and how to behave. Loaded automatically.

Example

"Always reference GAM personas when writing feature specs."

Powers

Packaged capabilities with docs + MCP tools

Bundles documentation, workflow guides, and external tool access into a single unit.

Example

Design System power: gives Kiro access to component docs and SAIL guidance.

Hooks

Event-driven automations

Trigger actions automatically when something happens (file saved, task completed, tool used).

Example

Run linter automatically every time a .ts file is saved.

Skills

On-demand specialized instructions

Activated by the user or auto-triggered when relevant files are opened. Gives Kiro deep expertise for a specific task.

Example

UX Content Standards skill: Loads full content guidelines when reviewing prototype copy.

Overview

- **Steering:** Always-on rules
- **Powers:** Add tools + docs
- **Hooks:** Automate reactions
- **Skills:** Specialized expertise on demand

Contributing

Repo Contributions

1. Clone the repo [choose a known folder to run this command]

```
git clone  
https://gitlab.appian-stratus.com/appian/dev/solutions-os.git
```

The following commands should be run while inside the solutions-os folder

OR pull latest changes* (if you already have repo cloned & you're starting a new branch)

```
git checkout main && git pull origin main
```

2. Create a branch

```
git checkout -b name-of-branch
```

Note: Checkout/pull latest changes from prod, push updates to dev

Repo Contributions

3. Add or edit files in your product folder, after making changes:

```
git add .    OR    git add file1 file2  
git commit -m "description of changes"
```

3. Pull in any recent changes

```
git pull --rebase origin main
```

4. Push and open a Merge Request

```
git push -u origin name-of-branch
```

Open the Merge Request link provided, open, and tag MR for review

Repo Contributions

What

- Domain docs (personas, vision, product overviews)
- Feature folders (specs, use cases, UX research)
- Competitive analysis
- Etc...

Keep it Current

This is a living repo maintained by the teams.

- When you make a product decision → update your product folder
- When a feature ships → update the feature spec
- Suite-level changes need review for downstream impact

Reminder: Context is King.

5

Next Steps

Next Week: SWAT-A-Palooza

May 13th - 14th

- Focus on advancing the Solutions OS
- Collaborate and develop technical solutions for existing problem areas

May 15th

Final presentations - share your progress!

Ongoing

- Add feature context for your solutions
- Experiment with Kiro tools and share successes
- Provide feedback about your experiences / setup
- Ask questions ~

Questions?
